Education

University of Toronto Toronto, ON

Master of Engineering in Computer Engineering & Identity, Privacy and Security (IPS) Jan. 2024 – Dec 2025

- Coursework: Computer Security, Cloud Computing, Deep Learning & Neural Network, Parallel Programming, Performant System with Rust
- GPA: 4.0/4.0

University of Alberta Edmonton, AB

Bachelor of Science in Computer Science *Sep. 2019 – Aug 2023*

- Coursework: Operating System, Computer Networks, Computer Architecture, Web Development, Mobile App Development, Database Management, Machine Learning, Agile Methodology
- Awards: *Dean's Honor Roll (22-23)*

Experience

Student Developer Jan. 2023 – Apr. 2023

University of Alberta ALT Lab *Edmonton, AB*

- Developed a website that generates interactive word graphs based on Cree words and their domains using React, D3.js and Docker.
- Reviewed 50+ PR and contributed 4K+ lines of code to the codebase via Git.
- Maintained web application documentation using MkDocs.
- Utilized Jest for unit testing and Cypress for E2E testing.

Back-End Engineer Intern May 2021 – Aug 2021

Nandou Six Star System integration Co., LTD *Wuhan, China*

- Wrote backend code that handled external HTTP requests from third party endpoints.
- Gained experience in Linux, Gunicorn, Nginx, SQLite and Django REST framework.

Projects

KV Store Database Github Aug. 2024 – Present

- Built a high-performance key-value store from scratch, supporting storage of fundamental C++ data types as keys and values.
- Designed and implemented the **Memtable** module using a Red-Black tree for efficient in-memory key-value storage and lookup.
- Developed Expandable **Buffer Pool** with LRU, CLOCK and RANDOM Eviction Policies.
- Developed the **SSTIndex** module to support efficient range scans and random searches in SST files, leveraging disk-based storage.
- Created **FileManager** module to handle SST file management. Integrated **Protocol Buffers** for serialization and deserialization of SST files and index metadata.
- Wrote unit tests for all modules using **Google Test** to ensure correctness and reliability.
- **Utilized**: C++, CMake, Google Test, Protocol Buffers

Distributed Linux Performance Analysis and Monitoring System Jun. 2024 – Jul. 2024

- Developed a Docker-based setup to build project environments with dependencies, facilitating easy deployment across multiple servers.
- Implemented the **Monitor** module using the Factory Design Pattern to create an abstract monitoring interface, including CPU status, system load, software interrupts, memory, and network monitoring.
- Built a Distributed System using **gRPC**; Deploying server on target machines and client library used by monitor and display modules, ensuring low coupling and high modularity.
- Utilized **Protocol Buffers** for serialization to define comprehensive data structures for the project.
- **Utilized**: C++, CMake, Docker, gRPC, Protocol Buffers, Qt

Technical Skills

Languages: C++, Rust, Python, C, JavaScript, Java
Frameworks: React, Django, Cypress, Jest, OpenMP, Material-UI, Ant-Design
Developer Tools: CMake, gRPC, protobuf, Qt, Git, Docker, Kubernetes, AWS
Libraries: Scikit-learn, Pandas, NumPy, Matplotlib, Scapy, D3.js, ReactFlow, Mininet
